SITE DESCRIPTION: (500 characters or 70 words)

Stonco has operated at the site from approximately 1970 to the present. Stonco has a closed system in which metal parts are powder coated. Prior to approximately 1985, Stonco had a painting line that utilized wet paints.

Prior to Stonco, a cosmetic company called Hazel Bishop operated at the site from the 1950's. Hazel Bishop utilized a railroad siding and the nature of their raw materials is not known.

A condominium development was recently constructed in a hydraulically downgradient position relative to Stonco. High concentrations of TCE were detected in the indoor air of the condominiums and a vapor remediation system was installed. High concentration of chlorinated solvents were detected in a ground water sample collected from a monitoring well installed on the downgradient edge of the Stonco property.

Based upon the possible use of solvents on the Stonco site, the NJDEP recommends a Site Investigation.
